WASTE MANAGEMENT

310 Leger Road
North Huntingdon, PA 15642
724-864-6476

Please be advised that we have adjusted some service vehicle dispatch to the Wilkins Twp. Area for the recycle recovery that is conducted every other week.

We have been running Wilkins Twp. Service in rear load trucks on a consistent basis for several months now. When we have the trucks and the extra helpers we follow this practice for business purposes. The volumes that are now generated, mostly due to the cardboard, have caused most weeks to have to do 2 loads to the landfill. Our rear load trucks can make the recovery in one load, thus we have a time savings and a more fluent route recovery.

To be direct, ALL of our recycle contracts have spiraled to higher levels and are experiencing the same volume issues. Aspinwall, as an example now pulls over 8 tons every two weeks. Lower Burrell now has routes that almost doubled the participation volume in the last 2 years. Please be assured, if we have a full recycle route running, as we do every other week on the Wilkins bid, **all material recovered is being processed as recycle**. Annual reports should reference recovered volumes.

I get calls weekly from all our areas with concerns on material processing when we need to adjust vehicles or routing for volumes. Your area residents are asking the same questions as all other service areas. Let me know if I can help in any way.

Thank you for the patience and assistance.
